Legend

The following legends are used throughout this manual:

AFR	Air Flow Rate
BPF.....	By Pass Factor
CFM.....	Cubic feet per minute
EER.....	Energy Efficiency Ratio
ESP.....	External Static Pressure
Hz	Hertz
in. wg.....	Inch water gauge
kW.....	Kilowatts
kg.....	Kilogram
lbs.....	Pounds weight

L/s.....	Liters per second
MBh.....	BTUhx1000
Pa.....	Pascal
Ph.....	Phase
PI	Power Input of Compressor in kW
RPM	Revolutions Per Minute
RPS.....	Rated Power Supply
TR.....	Tons of Refrigeration
V.....	Volts

Nomenclature

SKM reserves the right to change, in part or in whole the specifications of its Air Conditioning Equipment at any time in order to add the latest technology. Therefore, the enclosed information may change without any prior notice.

Introduction

SKM APMR-V Series NEW BLDC - Inverter Type Packaged Air Conditioners Series are designed and manufactured to meet the requirements of Gulf's severe climatic conditions and are built specifically for High Energy Efficiency ducted systems which will enable them to be installed easily on rooftop or on ground .

The APMR-V series Packaged Air Conditioners are compact, quiet, most efficient and self contained units are ideal for commercial and top end residential applications.

Available in 14 different sizes from 5 to 30 TR (20 to 105 kW) in 50/60 Hz at nominal AHRI conditions. APMR -V series packaged air conditioners are designed to operate in a wide ambient temperature range between 50°F (10°C) to 125°F (51.7°C). Two independent refrigeration circuits are provided where two compressors are used.

For Ratings above 125 °F , please contact SKM.

APMR-V units are designed and rated in accordance with AHRI 210/240 and 340/360 standards.

APMR-V series units from SKM are completely assembled, leak tested, vacuumed, internally wired and fully charged with R-410A refrigerant at factory. Each unit is fully factory tested before dispatch and is ready for installation. All that is required on the site is to connect ducts, drain lines, main power supply and field wiring to the thermostat. This greatly reduces the installation work and cost.

SKM provides qualified service and stock of replacement parts in all major cities of the G.C.C. countries, Egypt, Jordan, and Pakistan. See back cover for details or call SKM.

SKM Air Conditioning LLC

You name it.....We cool it

General Features

The **APMR-V** Series is a modern, diversified and environment friendly series of BLDC- Inverter type packaged air conditioners which use R-410A refrigerant.

The **APMR-V** Series BLDC- Inverter Packaged Air Conditioners are yet another new unique series from SKM incorporates many salient features which, together, provides a heavy duty, robust, long lasting commercial unit meant for high end residential and commercial applications.

The **APMR -V** series models combine high efficiency condenser and cooling coils, evaporator blower and heavy duty motor in addition to premium safety and operational controls.

The complete **APMR-V** series BLDC- Inverter type packaged unit provides an extremely rugged, long life, energy efficient, self contained packaged air conditioner that will provide cooling with higher efficiency over a long and extended life.

What makes APMR series yet another model in the top class range of SKM products is the use of:

- High efficiency totally sealed Inverter driven scroll hermetic compressors.
- Totally enclosed, Class F insulated, condenser and evaporator fan motors.
- Heavy duty condenser and evaporator coils optimised in design for long-life maintenance free operation.
- Cabinet construction specifically designed for Gulf climates.
- Advance microprocessor for the unit operation.
- Typically, much heavier gauge tubing and thicker fins for ruggedness and long life.
- Electronic expansion Valves for Precise Temperature control.

Main Component Features

The common standard features of all **APMR-V** series packaged units include the following

Compressors

Compressors used in **APMR-V** packaged unit series are BLDC type Inverter Driven, hermetically sealed, compact scroll with the following features:

- High Energy Efficiency.
- Variable speed
- Quiet operation, Low Sound levels.
- Compact and light.
- Limited wear.
- Unique ability to handle liquid refrigerant.
- Suction gas cooled compressor.
- Brazed fittings or Rotalock options.
- Two refrigerant circuits on larger units provides efficient part load.
- No internal valves.

Condenser Coils

Condenser coils are manufactured of seamless copper tubes mechanically bonded to aluminum fins to ensure optimum heat transfer. All coils are tested against leakage by air pressure of 715psig (**4930kPa**) under water. All standard coils are 2,3 or 4 rows With 14FPI (**1.8mm**) or 16FPI (**1.6mm**). An integral sub cooling circuit is provided to increase the cooling capacity, without additional operating cost.

Condenser Coil

For different application requirements, other optional condenser fin materials are available:

- Copper fins.
- Electrotinned Copper Fins.
- Copper finned coils with electro-tinned after manufacturing.
- Precoated Aluminum fins
The pre-coated is hydrophobic polyurethane resin. This option provides substantial corrosion protection beyond standard coil construction.
- Aeris Guard Coil Coating
The Aeris Guard Coil is a self etching high performance modified epoxy finish that is specifically designed to coat and protect Aluminum and Copper surfaces. In addition, the coating is ideal for the protection of ferrous and non ferrous materials.

All models are suitable for Gulf countries, ensuring the condenser coil design shall provide long life operation with the least possibility operational blockage on the condenser. Ample condenser surface and sensible air flow across the condenser ensures a low temperature differential between condensing temperature and the high Gulf ambient making the APMR packaged unit perform efficiently and durably.

Condenser Fans

The condenser fans are Propeller type , aluminium Sheet insert sprayed with PP plastic, directly driven by EC-Technology electric motors.

Motors are Totally Enclosed Air Over (TEAO) with class 'F' insulation and with IP55 protection.

The TEAO and class 'F' Insulation features ensure long life and are unique to SKM.

The motors are factory wired using wires specially selected for high ambient operation, to unit control panel where the motor contactors are located to control the operation of these motors.

The condenser fans are individually statically and dynamically balanced at the factory. Complete fan assembly is provided with Steel, coated with black plastic (RAL 9005) Guard Grille.

Evaporator

Evaporator coils are manufactured of seamless copper tubes mechanically bonded to aluminium fins to ensure optimum heat transfer. All evaporator coils are tested against leakage by air pressure of 450psig (**3103kPa**) under water. The DX evaporator coils are complete with headers of seamless copper tubing. Supply headers incorporate a correctly sized distributor. For different application requirements, other evaporator coil material and/or treatment are available on request :

- Copper fins.
- Electrotinned Copper fins.
- Copper finned coils with electro-tinned after manufacturing.
- Precoated Aluminum fins.

The pre-coated is hydrophobic polyurethane resin. This option provides substantial corrosion protection beyond standard coil construction.

- Aeris Guard Coil Coating.

The Aeris Guard Coil is a self etching high performance modified epoxy finish that is specifically designed to coat and protect Aluminum and Copper surfaces. In addition, the coating is ideal for the protection of ferrous and non ferrous materials.

Evaporator coils are rated in accordance with AHRI-410. Evaporator coil supplied with suitable size ELECTRONIC expansion valve(s) and multi-circuited distributors providing capacity modulation to match the compressors. The cross wave fins and staggered tubes design uses the evaporator surface effectively by creating uniform air turbulence and optimum heat transfer over the entire finned surface. Requirements for higher face velocities can be handled by use of moisture eliminators to avoid carryover.

FILTER SECTION

APMR-V series are supplied with 1" thick Aluminium type filters with grade G2 as standard for all models.

Evaporator Fan & Drive

Standard evaporator fan is forward curved centrifugal DIDW, statically and dynamically balanced complete with shaft, self-aligning, lubricated for life ball bearings.

APMR-V series have single and dual fans mounted on a single heavy duty shaft.

The fan(s) are driven by a single speed electric motor, Class F insulated, IP55 protected & are totally enclosed 4 pole motor rated for continuous operation at design conditions.

The motor is fitted with an adjustable V-belt drive, as standard. Shaft ends insert into oversized, tapered lock self-aligning, long-life bearings Motor is factory wired to the control panel where the motor contactor is located.

Casing and Structure

The unit casing used in **APMR -V** Inverter Packaged units is made of zinc coated galvanized.

steel sheets conforming to JIS-G 3302 and ASTM A653 which is phosphatized before application of an electrostatic powder coat of approximately 60 microns and then oven-baked for tough and lasting weather resistant finish. This finish and coating can pass a 1000 hour in 5 % salt spray testing at 95°F (35°C) and 95% relative humidity as per ASTM B117. The entire casing panels are designed to be leak proof against rain and ensure rain water cannot enter the packaged air conditioner interior.

The evaporator section is sealed with vinyl gaskets.

The standard evaporator section is insulated from all sides with black-neoprene faced heavy density 1" thick fibreglass insulation.

The insulation-cum-sound liner meets the fire requirements of NFPA90A & 90B and is secured with mechanical fasteners in addition to water resistant adhesive.

For applications requiring an inner skin in the evaporator section, option DSE provides an 0.7mm galvanized inner skin. Suitable isolation to ensure no cold-bridges and no condensation on the exterior of the units is provided. The condensate drain pan is heavily insulated to ensure condensation does not occur. Stainless steel condensate drain pans are available on request.

Refrigerant R- 410A

Why 410A?

R-410A has a higher volumetric cooling capacity compared to R-22 and has better thermal exchange properties. This results in overall performance gains in terms of system efficiency. The greater density of the vapour in R-410A permits higher system velocities, reduces pressure drop losses and allows smaller diameter tubing to be used. In other words a smaller unit can be developed using a smaller displacement compressor, less coil and less refrigerant while maintaining system efficiencies comparable to current day R-22 equipment.

Electronic Expansion Valve

Inverter series package use electronic expansion valve for precise control refrigerant mass flow. Our electronic expansion valve improves EER (Energy Efficiency Ratio) at full & part-load conditions. Also it improves temperature control & increases the range of operating conditions.

Control Panel

The unit mounted control panel enclosure is fabricated out of heavy gauge sheet steel in phosphatized powder coated baked finish. The enclosure conforms to IP54 as per guidelines in IEC 529.

- A compatible VFD drives compressors.
- Individual condenser fan motor contactors.
- Thermal magnetic circuit breakers for compressors and condenser fan motors.
- Voltage monitoring module for protection against under voltage, over voltage, phase loss, phase reversal and phase unbalance of the incoming voltage.
- Circuit breaker for control circuit.
- Microprocessor master board with graphical display.
- Electronic expansion valve control integrated in the controller.
- Control Relay.
- Control circuit on/off switch.
- Control terminal blocks and power terminal blocks.

Microprocessor control:

Microprocessor control system is available for Inverter series package as a standard feature. Our high-energy efficient package has a full function microprocessor control unit designed to keep the package running at its most energy efficient level. It is a rugged microprocessor-based controller that is designed for the hostile environment of HVAC industry. It provides flexibility with set points and control options that can be selected prior to commissioning a system or when the unit is live and functioning.

Displays, alarms and other interfaces are accomplished in a clear and simple language that informs the user as to the status of the system. It is designed to safeguard the system that is being controlled, eliminate the need for manual intervention and to provide a simple but meaningful man-machine-interface.

This controller provides complete operational control for the package and has built-in auto diagnostic capability that can signal normal operation or alarm conditions as well as shutting down the package or system, if necessary.

Room Unit

The controller comes with a loose supplied sleek and elegant design room unit for installing in the conditioned space. For the serial connection use three-wire shielded cable, AWG 20-22. The length of the network must not exceed 500 m. For extended networks fit a 120 Ohm resistor between RX/TX+ and RX/TX- on the first and last device, to avoid possible communication problems.

The room unit has a built in sensor for measuring the room temperature. It transmits room temperature, set point, unit-operating mode, operating schedule etc. to the unit controller.

The room unit has a built in sensor for measuring the room temperature. It transmits room temperature, set point, unit-operating mode, operating schedule etc. to the unit controller. Control of the compressors is based on room temperature and the set point, as standard. If unit control needs to be based on duct temperature, please specify during time of order.

The Main Features of the controller are as follows:

- A graphical LCD Display with back-lit that can be seen in bright or dim lighting.
- A six button generic keypad that is so user friendly, it rarely requires a reference manual.
- Multiple authorization levels to provide tight security of the control system.
- Usability and display The menu-based system allows the application to be configured as a tool for instant diagnostics. All this is possible by the immediately accessible overview screens and the commissioning tool.
- Quick menus information on the status, accessible directly from the main menu, without needing to access the submenus. Configuration, active function and operating temperature information are arranged in loops of screens, scrolled by pressing the DOWN button from the main screen.
- BMS 485/Modbus cpCO controller has a built in BMS port that allows direct interfacing with compressor driver an RS485 network with maximum baud rate of 19200.
- Capacity control based on temperature set point and the return air temperature. A special control zone based on return air temperature that reduces compressor cycling, and improved unit part load efficiency.

Display Information

SKM package offer a graphics LCD display which allows the operator to access different parameters of the package . Operator can view and change the set point of package parameters.

The graphical display has lot of features, trending is one of the key features of graphical display. The well designed keypad with three function keys, two

o direction keys and one selection key allows the operator to navigate through different Menu, such as:

- Status.
- Outputs.
- Inputs.
- Setpoint
- Alarm

System Control Philosophy

The unit may be enabled or disabled manually or through the use of an external signal from a building automation system (BMVF option).

Control is based upon set point and return air temperature. How fast the temperature changes is calculated and capacity decisions are based upon the rate, the current temperature, and the control temperature zone.

Capacity is never added if the system is moving toward the temperature target at an acceptable rate. The unit will monitor all control functions and stage the compressor to maintain the required operating capacity.

Easy Accessible Measurements Include:

- Status of the unit.
- Status of each circuit/compressor.
- Status of condenser fans.
- Suction pressure and temperature for each refrigerant circuit.
- Discharge pressure and temperature for each refrigerant circuit.
- Expansion valve opening percentage.
- All active set points.
- Run time for each compressor.
- Number of compressor starts.
- Lockout and alarm status.
- Log of last 100 alarms.
- Date and time.

System Protection

The following system protection controls will automatically act to insure system reliability and protection of the unit.

- Low suction pressure protection.
- High discharge pressure protection.
- High discharge temperature protection.
- Low discharge pressure protection.
- Low superheat protection.
- Compressor external thermal protection.
- Freeze protection.
- Under voltage, over voltage, phase loss, phase reversal and phase unbalance protection.
- Sensor error protection.
- Anti-recycle.
- 3-Levels of passwords to restrict the intentional mishandling.

Optional Features

Double Skin Evaporator (DSE)

Double skin evaporator section with galvanized inner skin.

Double Skin Insulation (DSI)

Inner skin in the evaporator section is provided with foam board insulation.

Flat Filter. (FSIP2)

Filter Section with Two-Inch Thick Washable Aluminum Flat Filter Media (EN Class: G3).

Alternative Condenser Material

Made of copper tubes and alternative fin material and/or protective coating.

- For Aluminum Fins with Aeris Post Coat Protection, specify [\(FAA\)](#).
- For Pre Coated aluminum fins, specify [\(FAP\)](#).
- For Copper Fins, specify [\(FC\)](#).
- For Copper Fins with Aeris Post Coat Protection, specify [\(FCA\)](#).

Alternative Evaporator Material

Made of copper tubes and alternative fin material and/or protective coating.

- For Aluminum Fins with Aeris post Coat Protection, specify [\(EFAA\)](#).
- For Pre-Coated aluminum fins, specify [\(EFAP\)](#).
- For Copper Fins, specify [\(EFC\)](#).
- For Copper Fins with Aeris Post Coat Protection, specify [\(EFCA\)](#)

Rotalock Valves on compressors (RVC)

For additional facilitation of maintenance of unit.

Pressure Relief Valve (PRV)

To protect the unit from being over-pressurized.

Pressure Gauges (SDG1)

Suction and discharge indication of each refrigerant circuit. Gauges mounted outside the Control Panel.

Condenser Coil Guard (CGP)

Wire mesh guard, in painted finish for condensers coils. Recommended on ground level installation where coil needs to be protected against vandalism.

Stainless steel drain pan (Grade 304) (SDP)

Stainless steel drain pan(Grade 304). Insulation under drain pan as per SKM standard.

Stainless Steel Drain Pan (SSP)

Heavy gauge 316 stainless steel drain pan under the entire cooling coil and moisture eliminator. Insulation under drain pan as per SKM standard.

Up Size Evaporator Motor (USM)

Unit with one up size evaporator motor.

IP 55 Control Panel (ICP)

Control Panel for special applications to meet IP55 requirements.

Main Isolator (without door interlock) (ISO)

For main power isolation. (consult SKM)

BMS interface volt free contacts (BMVF)

Volt free contacts for run status, common fault status, auto mode status and provision for remote on/off shall be provided as option if required. For additional requirements, please contact SKM.

Voltage Monitoring Module as per DEWA (DVM)

Under voltage relay as per DEWA regulations. This option is available for Dubai, UAE only.

Note:

- Whenever multiple option related to unit control, please consult SKM for the drawings as the size of the control panel might change.

Table 4

Notes:

- (1) Capacity ratings are based on AHRI Standard 210/240 & 340/360. Evaporator entering air conditions of 80°/67°F (27°/19.5°C) dry bulb/wet bulb and condenser entering air temperature of 95°F (35°C) dry bulb.
- (2) Capacity ratings based on evaporator entering air temperatures of 80/67 °F (26.7/19.4 °C) dry bulb/wet bulb and condenser entering air temperature of 115 °F (46.1 °C).
- (3) Capacity is gross capacity which does not include the effect of evaporator fan motor heat.

Table 13

Legend

MFA Maximum Fuse Amps (for fuse/circuit breaker sizing), complies with NEC Article 440-22 & 430-52.

MCA Minimum Circuit Amps.(for wire sizing), complies with NEC article 440-33.

RLA Rated Load Amps. (at worst operating condition)

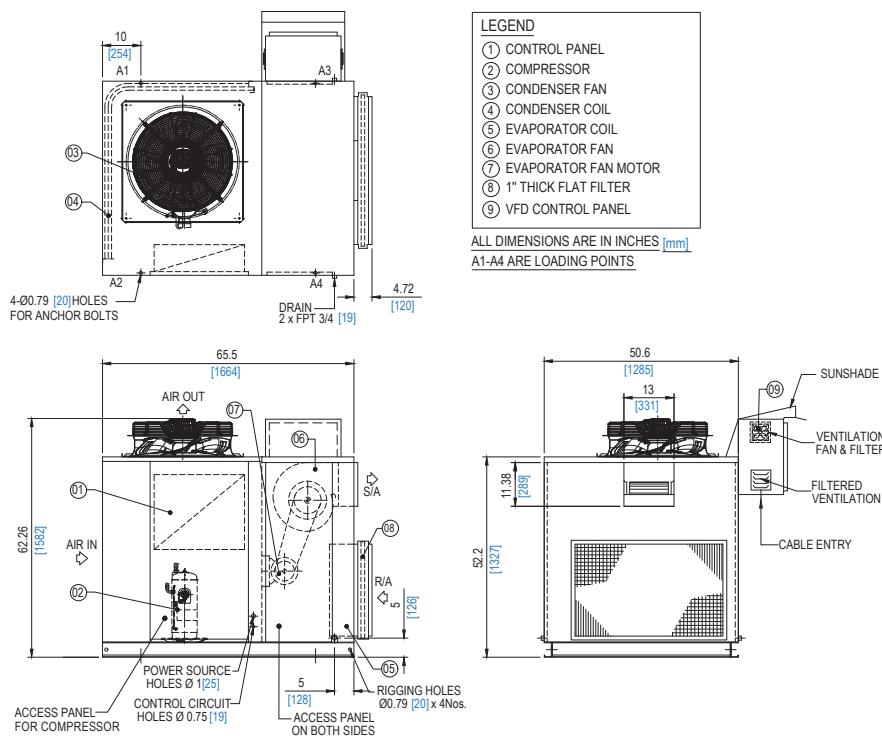

LRA Locked Rotor Amps

FLA Full Load Amps

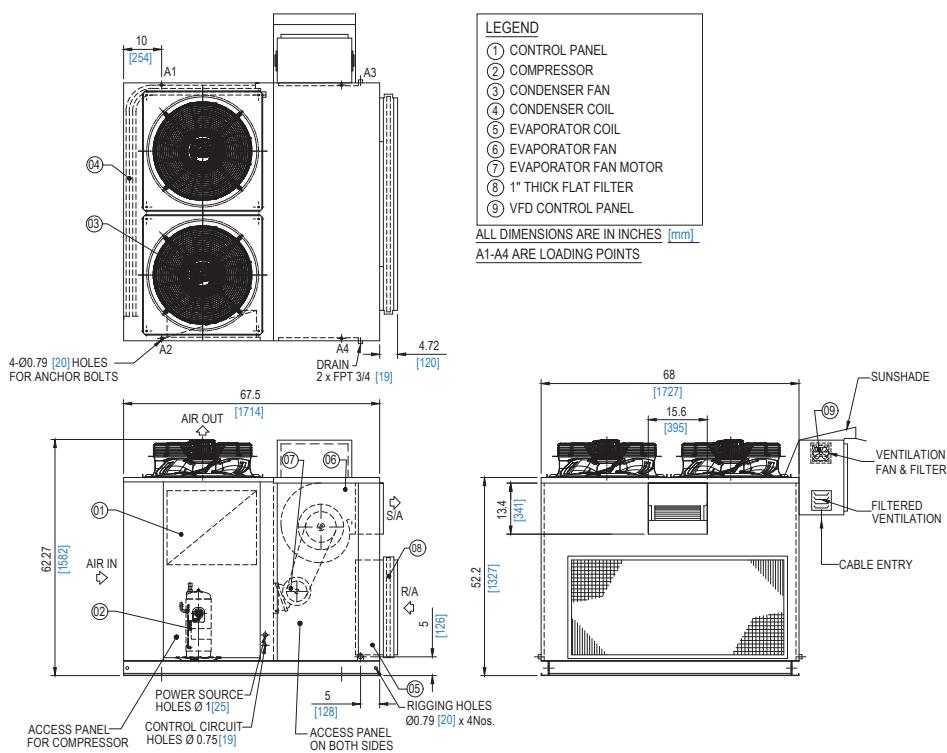

Note : Voltage imbalance not to exceed ± 2 % of the rated voltage.

Dimensional Data

APMR-V Model - 51005, 51006 & 61005, 61006

APMR-V Model - 51008-51010 & 61008-61010

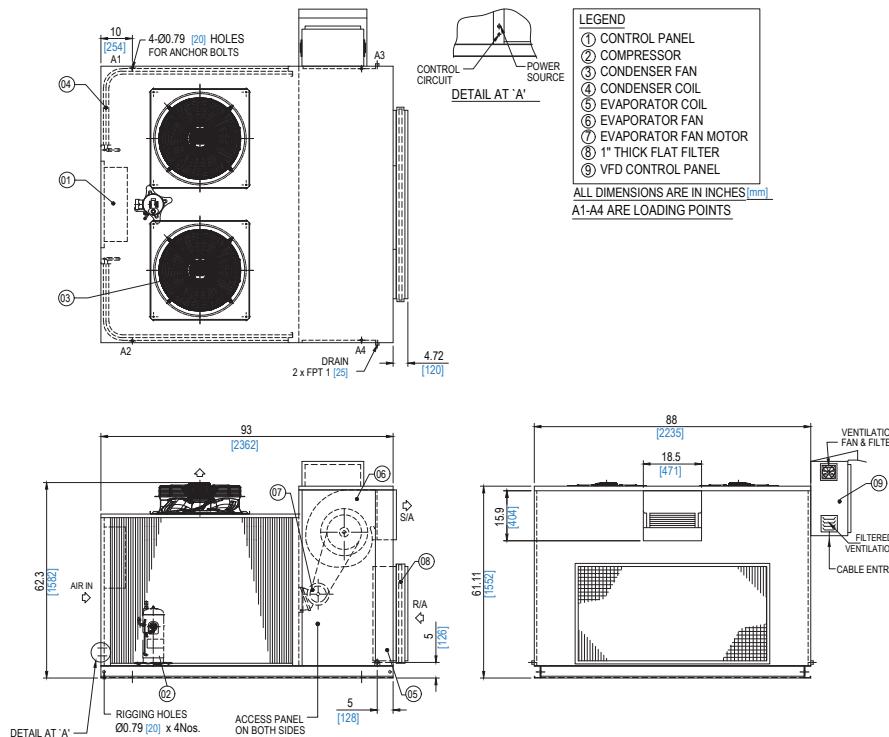

Note :

1. Drawings are not contractually binding.
2. Before designing an installation, consult the certified drawings, available on request.
3. For single unit and multiple unit installation or unit is installing near to the wall, Please refer to the recommended clearance drawings (26).
4. Dimensions shown in standard drawing are suitable only for open trailers. In case of closed container please consult SKM as the unit dimension will change.

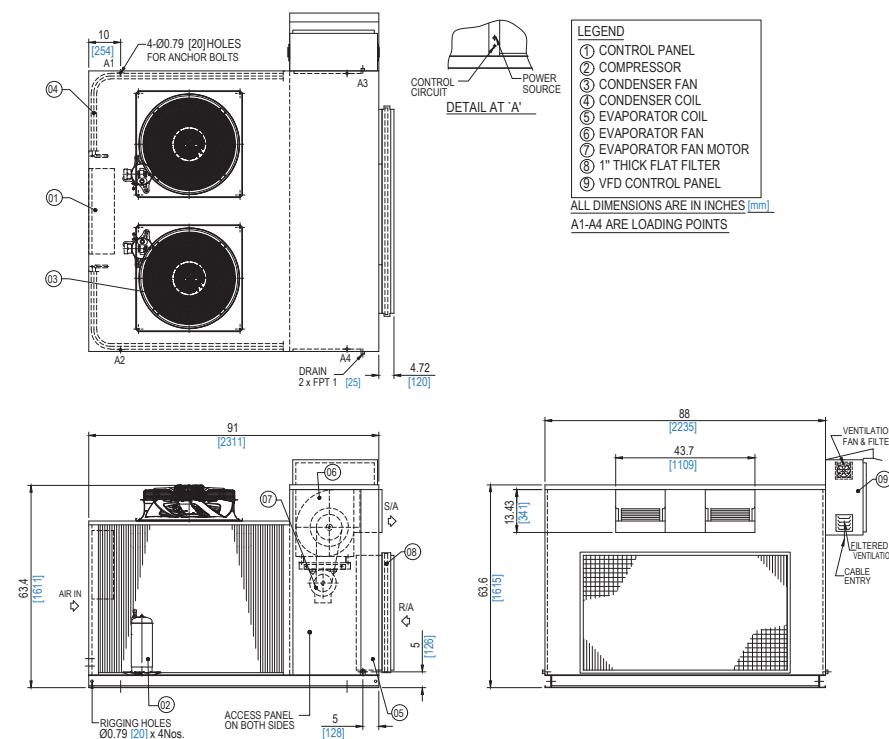

Dimensional Data

APMR-V Model - 51011, 51012 & 61011, 61012

GUIDE SPECIFICATIONS

GENERAL

Packaged Air Conditioners shall be composed of compressor(s), condenser & evaporator coils with fans, refrigerant piping, electrical components & enclosing cabinet in one piece. These units shall be factory assembled, internally wired, fully refrigerant charged with R410A, tested under strict quality standards & are suitable for outdoor installation on rooftop or ground level with ducted system. These units shall be capable to operate from 50 °F (10°C) to 125 °F (51.7°C) ambient temperature without failure & shall be rated in accordance with AHRI-340/360 and AHRI- 210/240 standards. Capacity as per attached schedule.

COMPRESSOR(S)

Compressor shall be BLDC- INVERTER Driven hermetic scroll, refrigerant gas cooled furnished with crankcase heater, and shall be mounted on rubber isolators.

CONDENSER COIL(S)

Coil shall be air cooled with integral sub-cooling circuit, constructed of seamless copper tubes 3/8" OD mechanically bonded to aluminium or copper with corrugated cross-wave fins with maximum 14 FPI (1.8mm) or 16FPI (1.6MM) spacing. Coil shall be tested against leakage by pressurizing air at 715psig (4930kPa) in coil,, under water, cleaned and dehydrated at the factory.

CONDENSER FAN(S) & MOTOR(S)

The machine shall be furnished with Electronically Commutated direct driven propeller type discharging air upward condenser fans. Fans shall be constructed of corrosion resistant blades such as heavy gauge aluminum. The fan and drive shall be held in proper alignment.

Fan assemblies shall be provided with heavy gauge, rust resistant steel wire fan guard. All condenser fans shall be individually, statically, and dynamically balanced for vibration free Operation.

Motors shall be Totally Enclosed Air Over, Class-F insulation, IP-55 Protected depending on models and factory wired to unit control panel.

EVAPORATOR COIL

Evaporator coil shall be constructed of seamless copper tubes 3/8" OD mechanically bonded to aluminium or copper corrugated crosswave fins with maximum 14 FPI (1.8mm) spacing.

Coil consists of headers of seamless copper tubing, Electronic expansion valve(s) & multi-circuited distributor(s).

These coils shall be tested against leakage by air pressure of 450psig (3103kPa) under water. cleaned & dehydrated at the factory. Coil shall conform to AHRI-410.

EVAPORATOR FAN & MOTOR

Fans of evaporators shall be forward curved, double inlet double width (DIDW), centrifugal type, statically & dynamically balanced, mounted on a single heavy duty shaft with permanently lubricated bearings and belt driven by V belt with an adjustable variable pitch motor pulley.

Motor shall be Totally Enclosed Fan Cooled (TEFC), 4 poles, class-F insulated, minimum IP55 protection & wired to unit control panel.

REFRIGERANT PIPING

The refrigerant circuit piping shall be fabricated from ACR grade copper piping, with 1 & 2 refrigeration circuits, each liquid line shall include, shut off valve, filter drier, solenoid valve, sight glass and Electronic expansion valve.

Oil separator and discharge line check valve is a standard feature of this series.

Suction line shall be insulated with 1/2" (12mm) wall thickness enclosed cell pipe insulation with maximum K factor 0.28 Btu.in /ft2.h.°F. (0.040 W/mK).

CASING

Unit casing shall be made of zinc coated galvanized steel sheets conforming to JIS-G3302 and ASTMA653 which shall be phosphatized and then electrostatically dry powder coated of approx.60 microns to provide an extremely tough, scratch resistance, excellent anticorrosive protection that can pass 1000 hrs in 5% salt spray testing at 95°F (35°C) and 95% relative humidity as per ASTM B117.

Evaporator section shall be sealed with vinyl gaskets and completely insulated faced with black glass tissue (BGT) heavy density, fire retardant, 32 Kg/m³ density having Max. K factor 0.23 Btu.in /ft2.h.°F (0.033 W/mK) and permanent odorless fibre glass insulation of minimum 1" (25mm) thickness.

FILTER SECTION

Flat Filter Section incorporating 1" (25mm) thick is provided as standard and 2" (50mm) thick filter having an average arrestance efficiency of 54% as per ASHRAE Standard 52.1 or equivalent can be provided as an option.
